Bachelor in Software
Analysis, first year
2018 – 2019

Professional Experience

Full-Stack Developer

o2o Jan. 2025 – May 2026

- Optimized and upgraded internal leasing management platforms. (~100K leases, ~500K offers, ~20K clients)
- Full-stack development in PHP Laravel, JavaScript and Vue 3, integrated with SQL databases and FileMaker.
- Maintained and updated a React-based platform.
- Migrated and reformatted MySQL data to FileMaker and PostgreSQL using asynchronous Node.js jobs. (~10K leases, ~100K offers, ~1K client records)
- Designed and built an internal data transfer platform with Next.js and React.

Full-Stack Developer

Ubike May 2023 – Dec. 2024

- Active contributor to the modernization of a legacy system into a structured, scalable architecture.
- Designed and delivered 4 custom client platforms using Next.js / React, powered by a RESTful PHP Symfony API (~10K leases, ~100K offers, ~1K client records).
- Improved infrastructure scalability and overall user experience.

TECHNICAL SKILLS

Backend

PHP (Symfony, Laravel, Yii2), Python, Node.js, REST API design

Frontend

JavaScript, TypeScript, React, Next.js, Vue 3, Redux Toolkit, Material UI, Figma

Databases

MySQL, PostgreSQL, MongoDB

DevOps

Docker, Docker Swarm, Traefik, CI/CD (GitHub Actions), Linux, self-hosting

Tools & Methods

Git, Agile (Scrum), ITIL 4 Foundation, ServiceNow, OpenAI API

Software Engineer | System Support

CTG Belgium Sep. 2022 – May 2023

- Trained on ServiceNow and developed custom tools and workflows on the platform as the primary mission.
- Second-line IT support across multiple buildings: workstation deployment and configuration, VPN troubleshooting, docking station firmware and driver management.

Jr. Full-Stack Developer

JTP world srl 2021 – 2022

- Delivered interventions and feature development across multiple client stacks: customized WordPress, Laravel and Symfony.
- Built and integrated RocketChat solutions (Meteor / Node.js).

SIDE PROJECT

Founder & Developer

Ping Game · ping-game.com 2022 – ongoing

Web platform to create, promote and join gaming and e-sports events.

- Frontend: Next.js 14, React 18, Redux Toolkit, Material UI, self-hosted i18n (Tolgee).
- Backend: Symfony 7 (API Platform, JWT Auth, Doctrine, Messenger, RoadRunner).
- Infrastructure: Docker Swarm (Portainer), Traefik, MySQL, RoadRunner Jobs, CI/CD via GitHub Actions.
- Key features: event and team management, OAuth2 (Discord, Google, Steam), notifications, automated backups.

DevOps / Infrastructure

GEM, FiveM roleplay server ongoing

- Manage and maintain the full server infrastructure.
- Designed and operate the backup strategy for both the FiveM game server and its databases.
- Implemented anti-DDoS protection and IP masking to secure the production infrastructure.
